

*Kindly add the following Abstract of the Disclosure at the end of the application following the last page of the claims. The Abstract of the Disclosure is also set forth on a separate sheet at the end of this Preliminary Amendment.*

**ABSTRACT OF THE DISCLOSURE**

A vehicular glazing panel comprises a pane of glass, first and second electrically conductive components and lead- free solder which joins the second electrically conductive component to the first (which exists on a surface of the pane of glass). The lead-free solder includes a mechanical stress modifier, selected from bismuth, tin or antimony, which inhibits the occurrence of a stress fault in the pane of glass in the region of the solder, and contains tin in an amount less than 90 % by weight. The first and second electrically conductive components are often a busbar and an electrical connector, or an antenna element and an antenna connector, respectively.
